PRODUCT DATA SHEET

CENITCONNECT DOCUMENT DISTRIBUTION MANAGER

THE PRODUCTS

Even today, high-performance cross-location work is still a challenge. Two points are decisive for this. Firstly, the network speed with which the individual locations are connected and secondly, the size of the data to be transferred. Particularly in the CAD environment, the data volumes are already very large and the connection speed of the remote locations is often a limiting factor.

For this reason, CENIT has developed the cenitCONNECT Document Distribution Manager (DDM) add-on. DDM is an add-on to SAP Content Server and SAP Cache Server.

The potential benefits that can be realized with the help of DDM are

- Reduced network load during peak operating hours
- Improved response time behavior when accessing documents
- Optimization of the IT resources used through a balanced ratio of centralized and decentralized elements.

THE SCOPE OF SERVICES

DDM enables the on-site provision of SAP originals in accordance with defined rules. Thus, SAP cache servers can be pre-filled based on rules. Since this can happen asynchronously, edge times can be used to reduce the network load. The required SAP originals are directly available to the user, since they are stored in the local cache server without any load on the external network.

THE FEATURES

- Manual or event-controlled moving of originals to other locations.
- Manual or event-driven filling of SAP Cache Server.
- Automatic update of SAP Cache Server for defined documents.
- Asynchronous provision of CAD models or complete assemblies at remote locations
- Rule-based assignment of storage categories.
- Local check-in of files checked out from remote Content Servers

AREAS OF APPLICATION

This add-on is suitable for customers who need to provide large amounts of data to different locations. The add-on is used by the IT department.

SYSTEM REQUIREMENTS

The following software versions are supported:
Currently released version 1.5.

Server

- SAP ERP 6.0 or higher.
- DDM is fully available for SAP S/4HANA.
- SAP Content Server and SAP Cache Server 6.40 or higher

Client

- SAP GUI 6.40 or higher

General information

SAP Content Server and SAP Cache Server should be set up and running. Usually, the setup and configuration of these SAP components are not included in the scope of CENIT's DDM service offering.

LICENSES

Item number	Item description
CSN-DDM-01-BASE/P	DDM Base modul
CSN-DDM-02-CONTENT/P	DDM weiterer Content Server
CSN-DDM-03-CACHE/P	DDM weiterer Cache Server
